

Product Specification Sheet

Targus DEFCON® A.R.T. Security Plate (10-Pack)

Part #: ASP40US

Product Description:

The Targus DEFCON® A.R.T. Security Plate is a theft deterrent and equipment tracking solution that utilizes a patented tattoo process to permanently etch a laptop or other electronic device making it difficult to resell. The plate is applied with an adhesive so strong that removal of the plate will alter the surface of the equipment's case; if the plate is removed a chemically etched mark that cannot be removed without damaging the device is revealed. Each security plate includes a unique bar code that is linked to the owner's tracking information and Targus has partnered with Stop to provide free tracking service for the life of the device so registration is only required once. If a registered device is found a call to the 800 number on the plate starts the process of recovering the equipment and returning it to the registered owner. Designed for corporate use, the Targus DEFCON A.R.T Security Plate makes it easy for a company to mark and track their devices to promote honest usage and deter theft

Product Features and Specifications:

- **Visual Theft Deterrent** - Security plate permanently marks a device to help prevent theft; A potential thief may bypass a marked computer for one that is easier to resell
- **Patented Tattoo Process** - Chemically and indelibly etches the device
- **Equipment Recovery & Tracking** - Enables a safe return for lost, stolen or misplaced items. Recovery handled through Stop Security Tracking via the 800 number or the web; Service allows the owner to keep track of equipment from any web browser
- **Lifetime Services and Support** No annual renewal or additional fees, register once and receive lifetime support
